REPORTS OF THE 1960 POPULATION CENSUS

(Provisional List of Publications)

VOLUME I—THE GAZETTEER.

VOLUME II—STATISTICS OF LOCALITIES AND ENUMERATION AREAS.

ADVANCE REPORT OF VOLUMES III AND IV (based on a 10 per cent sample).

*VOLUME III—DETAILED DEMOGRAPHIC CHARACTERISTICS: sex, age, birthplace, country of origin, tribe, school attendance and level of education for local authorities and large towns with regional and national summaries.

*VOLUME IV—DETAILED ECONOMIC CHARACTERISTICS: type of activity, industry, occupation and employment status for local authorities and large towns with regional and national summaries.

*VOLUME V—GENERAL REPORT: administrative report; evaluation of Census data; appendix of selected tables.

*VOLUME VI—THE POST ENUMERATION SURVEY—Statistical Summary.

SPECIAL REPORTS

*A STATISTICS OF LARGE TOWNS.

*B SOCIO-ECONOMIC INDICES OF ENUMERATION AREAS.

*C CENSUS DATA FOR NEW REGIONS.

*D LIST OF LOCALITIES BY LOCAL AUTHORITY, arranged in order of geographic code number and showing the number of population and houses.

MAPS

*A PLAN OF ENUMERATION AREAS: a map for each region and for certain towns showing boundaries of Enumeration Areas.

*B STATISTICAL MAPS presenting characteristics of the population in local authorities and regions.

* Not yet published.

PREFACE

This is the second of the six main volumes which will be issued in connection with the 1960 Population Census. In the preface to the first volume I stressed the role which modern scientific techniques of enumeration played in the 1960 Population Census and paid tribute to the United Nations for the technical assistance which was given to the Government of Ghana in connection with the Census.

Apart from the United Nations it is appropriate to mention the enthusiastic interest which was shown in the Census by the whole Nation. The Census operation aroused considerable interest throughout the country and it was regarded as a national project of very high importance. It was largely through the efforts of the President and the Government as well as the chiefs and people of the Nation that the Census was conducted successfully.

It is always difficult to single out individuals and to express appreciation for their contribution in a national project such as this. It is, however, in order to pay tribute to Dr. Benjamin Gil, the United Nations Census Expert who did much to bring about this volume.

On page (iii) the organisational set-up of the Census Office (20th March, 1960) has been given. All individuals whose names appear in this chart made very valuable contributions and it is necessary to place on record their untiring efforts and the sense of duty displayed by them during the difficult times of the operation.

The present volume relates to five basic population characteristics, namely, sex, age, birthplace, school attendance and economic activity. This volume is of extreme importance in the administration of the country and the Census Office will be glad to offer advice and to assist in its various uses. Since March, 1960 when the Population Census was conducted there have been some changes in the number and boundaries of regions and local authorities. It is likely that there will be more changes before the next Population Census. Where such changes do not cut across the boundaries of Census Enumeration Areas it is possible to compile statistics on the basis of the new set-up. The Census Office can always offer guidance in the extraction of statistics for these new administrative areas.

Two additional volumes are being planned to give more detailed statistics on the economic and social characteristics of the population. There will be a fifth volume, the General Report, which will contain the history of the Census and some evaluation of its data. A statistical summary of the Post Enumeration Sample Survey is also planned as the sixth volume.

The Census Office welcomes suggestions which will enable it to improve upon this and other volumes in future population censuses.

E. N. OMABOE
Government Statistician

A. INTRODUCTION

1. THE USES OF VOLUME II

1.1 This volume is one of the few examples in population census publications where *small area statistics* are given for small localities and Census Enumeration Areas (E.A's) covering the whole country. There are two slight modifications of this system of presentation. For larger localities comprising more than one E.A., usually localities of more than 1,000 population, which follow at the end of each local authority list, the data are given in respect of the entire locality without distinction of E.A's. The data on E.A's in such localities can, however, be obtained from Census Office files. It is also possible that E.A. statistics for larger towns which have a municipal status will be published in special reports. Another modification was introduced in three local authorities in the Northern Region—Bulsa, Kassena-Nankanni and Frafra. (For details see sections 1.2, 2.5 and 2.7 below).

1.2 The statistics shown relate to five basic population characteristics—sex, age, birthplace, school attendance and economic activity. The data are arranged in a convenient order which makes it possible by simple addition to obtain the totals for each E.A. In each E.A. the localities shown separately are usually those which have a population of 200 or more while the remaining small localities and hamlets are shown together under the description REST OF E.A. If in an E.A. none of the localities was of the 200 size, then the largest one is mentioned separately in order to point out at least the name of one locality. While the locality code (see 2.7 below) gives an easy reference to the E.A. maps the name of the locality can be used to identify the area in the field. The largest locality in an E.A. is indicated by a code number ending in '01'. The other localities in the E.A. which have 200 or more population are not arranged according to size and the code number given does not indicate either the order of size or the location of the locality within the E.A. but can be used as a reference in connection with the *Gazetteer* (Volume I) or any other complete list of localities issued by the Census Office. The localities grouped under REST OF E.A. appear in Volume II under the five-digit E.A. code number. For further information as to what localities are included in this group (their name and population) the reader is referred to the List of Localities by Local Authority published in mimeographed form by the Census Office. In this list the localities are given according to serial number of E.A's within each local authority which makes the reference to Volume II very easy.

In three local authorities of the Northern Region: Bulsa, Kassena-Nankanni and Frafra the relation between the E.A. statistics and those of the localities is somewhat different. In these local authorities the E.A. boundaries could not, for certain reasons, follow along

the boundaries of the large localities so that several E.A's comprise one or more small localities and a part(s) of a large locality. Consequently, the REST OF SMALL LOCALITIES IN E.A., added to the other localities listed for the same E.A. do not give the totals of the E.A. (as in the case of the REST OF E.A.). E.A. statistics for these three local authorities will appear in a separate publication.

1.3 The E.A's are arranged in a geographic order identical with that on the E.A. maps in connection with which these data should be used. One can (with the exception of the three local authorities mentioned above) by adding up statistics for selected E.A's obtain data for areas specifically selected for certain purposes which may not be identical with the local authority areas existing as at Census date (20th March, 1960). Also the boundaries of the present local authorities might undergo changes before the next Census, in which case this volume will be very suitable for the provision of statistics on the four items for the new local authority areas. The only *proviso* would be that the delimitation of the boundaries of the future local authorities should take into consideration the Census E.A. boundaries which are clearly plotted on the maps and have, with a few exceptions, a reasonably accurate boundary description readily available from Census Office files.

1.4 It is hoped that Government (Central and Local), private business and scientific agencies will find in this volume useful information for estimating the actual and potential demands of and supplies by various population groups in small areas distinguished by sex, age, birthplace, school attendance and type of activity. An attempt was made to give a classification of these basic characteristics of the population to suit as many purposes as possible. For example, in the age distribution shown one finds the age of infants (below 1 year), small children in pre-school age (below 5 years), compulsory school-age (5–14 or 6–14 years), main child-bearing age of women (15–44), working age (15–64), old age (65 and over) etc. The range of uses of the data is so wide that only a few, and not necessarily the most important, can be mentioned here. The figures can form the basis for estimating the requirements of the population in the fields of: education (schools, teachers etc.), health (hospitals, clinics, medical personnel and equipment, sanitary services), social welfare services, water and electricity, roads, transport, communication, consumer goods and labour. In the field of government administration the information in this volume can be used to divide the country into convenient administrative areas such as local authorities, districts, electoral wards, health-education and police-districts. Statisticians and other social research workers may find it convenient to use these data as a frame for sampling designs or other research purposes.

2. EXPLANATIONS OF CONCEPTS AND DEFINITIONS

2.1 Four important points should be emphasized:

- The concepts, definitions and classifications used in the Ghana Census were largely based on international recommendations.¹ Departures from these recommendations were due to the need of adaptation to local conditions. These modifications are mentioned in the relevant parts of the explanations given below.
- Every endeavour was made to obtain complete information on the population. Enumerators were instructed on the methods to employ in cases where a person did not know the detail required or whenever a person could not be contacted. For example, in cases of lack of knowledge of age various methods were suggested, and if a person could not be contacted the enumerator had to rely on information received from other persons in the house or in the neighbourhood. The general rule was that, in no circumstances, should a question be left unanswered. The assumption behind this instruction was that the likelihood of bias arising in an answer from an indirect source of information would be less than in a case of non-response.
- In the few cases where enumerators failed to make the required entry special techniques were used during the processing of the Census information to 'assign' the omitted information. A similar procedure was used in cases of inconsistent or ambiguous entries. Consequently, categories such as 'not stated', or 'ill-defined' do not appear in the Census tables.
- Some of the concepts used in this volume are more exhaustively explained in Volume I and in the Advance Report of Volumes III and IV under similar headings. They are, therefore, treated here only briefly.

2.2 REGION: At the time of the Census (March 20th, 1960) there were six regions in Ghana: Western, Eastern, Volta, Ashanti, Brong-Ahafo and Northern. The area around Accra City comprising Accra Municipal Council, Tema Development Corporation and Ga-Dangbe-Shai Local Council forms geographically and legally part of the Eastern Region. It is, however, separately administered by the Minister responsible for Local Government. This area was considered, for Census purposes, as a seventh region under the name of Accra Capital District (Accra C.D.).

1. Particular reference should be made to the following publications:

- Principles and Recommendations for National Population Censuses, Statistical Papers, series M, No. 27, Statistical Office of the United Nations, New York, 1958.
- General Principles for a Housing Census, Statistical Papers, series M, No. 28, Statistical Office of the United Nations, New York, 1958.
- Handbook of Population Census Methods, Volumes I to III, Studies in Methods, series F, No. 5, Rev. 1, Statistical Office of the United Nations, New York, 1958-1959.
- Indexes to the International Standard Industrial Classification of all Economic Activities, Statistical Papers, series M, No. 4, Rev. 1, Add 1, Indexed Edition, Statistical Office of the United Nations, New York, 1959.
- International Standard Classification of Occupations, International Labour Office, Geneva, 1958.

A small map of Ghana (on the 1:3,000,000 scale) showing these Census regions is bound in with this volume; whilst for each individual region a separate and more detailed map (on the 1:250,000 scale) is available in the map supplement which accompanies the Census volumes (Plan of Enumeration Areas).

The boundaries of the regions were established with the determination of the boundaries of the local authorities which legally formed part of the various regions. A comparison between the administrative boundaries existing at the time of the 1948 Census and those existing at the time of the 1960 Census is made in the Introduction to Volume I. Briefly, however, the Gold Coast Colony as constituted in 1948 was covered by the Western Region, Accra Capital District, Eastern Region and the lower and central parts of Volta Region in 1960; Ashanti of 1948 corresponded broadly to the Ashanti and Brong-Ahafo Regions of 1960; whilst the Northern Territories of 1948 were covered by the Northern Region together with the upper third of the Volta Region in 1960.

It may be found helpful to refer here to certain changes which have occurred in the regions since the 1960 Census. Under the Regions of Ghana Act the Western and Northern Regions were divided into two on June 29th, 1960, four new regions being created from existing local authorities as follows:—

<i>New region</i>	<i>Code numbers of local authorities</i>	<i>Population</i>
Western ..	01, 02, 03, 14, 15, 16, 17, 18	626,155
Central ..	04, 05, 06, 07, 08, 09, 10, 11, 12, 13	751,392
Northern ..	80, 81, 82, 83, 84, 85, 86	531,573
Upper ..	87, 88, 89, 90, 91, 92, 93	757,344

Further reference may be made to the map bound in with this volume and to the Plan of Enumeration Areas for the Western and Northern Regions in the map supplement.

2.3 LOCAL AUTHORITY: When the geographical preparations for the Census were commenced there were 262 local authorities. Under various Local Government Instruments, mostly of July and October 1959 and January 1960, a new division of the country was effected, establishing an aggregate of sixty-nine local authorities. This was the total at the time of the Census and these are the local authorities for which Census data are published.

Of the sixty-nine local authorities four have 'municipal' status (Accra, Kumasi, Sekondi-Takoradi and Cape Coast), ten 'urban' status (Agona Swedru, Nyakrom-Nkum, Tarkwa-Abosso, Nsawam, New Juaben, Oda-Swedru, Keta, Obuasi, Sunyani and Tamale) and one special status (Tema Development Corporation).

Local authorities are given code numbers arranged by region. The name and code number of each local authority is given in the list of contents at the beginning of this volume.

In all but a few cases the boundaries of both the former and the new local authorities were neither physically demarcated nor mapped. In the circumstances, geographical teams of the Census Office plotted them on the basis of information received from the local authorities. The method employed was to determine the local authority affiliation of settlements and then to insert boundaries between settlements belonging to different local authorities. Local knowledge was drawn upon wherever possible for a more precise indication of the nature of the boundary such as a stream or a footpath. Mapwork was usually conducted on the 1: 62,500 scale (approx. one mile to the inch) in the south of Ghana and on the 1: 250,000 scale (approx. one quarter of an inch to the mile) in the north.

It should be emphasized that these boundaries were plotted for statistical purposes only. They do not convey any legal or administrative authority. In the absence of officially demarcated boundaries, however, the Census boundaries may be regarded as provisional local authority boundaries.

Since the date of the Census a number of official changes relating to local authorities have been made, the most important being the division of Manya-Yilo-Osudoku (L.A. 36) into two local authorities, and the division of Gomoa-Awutu-Effutu (L.A. 07) also into two local authorities (see Executive Instruments 170/60, 171/60, 80/61 and 81/61). The creation of these new authorities brings the total number of local authorities up to 71 at the time of writing (June, 1962) and further changes are now under consideration.

2.4 ENUMERATION AREA: An Enumeration Area (E.A.) was the area allotted to an individual enumerator at the time of the Census for the purposes of enumeration. Its estimated population usually ranged from 700 in rural areas of dispersed settlement to 1,500 in urban areas.

E.A. boundaries were determined by field survey by geographical teams of the Census Office. Wherever possible clearly visible and permanent or near-permanent features such as streams, roads, tracks and major footpaths were selected as boundaries. These boundaries are indicated on the published Census maps of the regions.

E.A.s of municipal and urban councils, and of towns in local councils, are not shown on the regional Census maps because of lack of space at the scale employed. Detailed Census plans of the more important of such authorities and towns are to be published separately.

2.5 LOCALITY: Apart from certain exceptions which are discussed below, each nucleated and physically distinct settlement was regarded as a separate locality for Census purposes. No particular population size is implied in the term: a locality may be a single house, a hamlet, village, town or city. An arbitrary distance of 200 yards was selected as the maximum open space, or non-built-up area, permitted between two parts of the same locality. Settlements further apart than this distance were normally regarded as separate localities. As a general principle, concerning the definition of a locality, it was considered safer to err on the side of over-division than under-division since, in census processing and analysis, it is undoubtedly easier to group together localities than to divide them.

Exceptions to the rule described above are as follows:

- a. In some instances enumerators inadvertently grouped together physically separate localities under a general area name such as *Bepoase Villages* (5607904) or *Bontibor Hamlets* (5608401) meaning 'villages' in the vicinity of Bepoase and Bontibor, respectively. Fortunately, such deviations were not widespread and do not affect the basic principle.
- b. Most of the *huzas* of the Krobo and Shai in the Eastern Region appear to have been recorded as single localities. In contrast with the typical nucleated villages of the forest zone, *huzas* are linear, each consisting of a line of separate compounds some of which may be more than 200 yards apart. *Huzas* may stretch for over a mile in length. The best examples are to be found in Manya-Yilo-Osudoku (L.A. 36), although migrant Krobo and Shai have established *huzas* elsewhere. These deviations are not numerically important and are not, in any case, misleading in a social context.
- c. In savanna areas of dispersed population the principle of physical nucleation could not apply. Localities based upon traditional kinship groups were recorded by the enumerators. Any attempt to do otherwise would have led to a meaningless multiplicity and confusion of 'locality' names. Dispersed localities of this sort are to be found in the compound farming areas of north-east Ghana in Builsa (L.A. 90), Kassena-Nankanni (L.A. 91), Frafra (L.A. 92) and Kusasi (L.A. 93); and to a limited extent on the Accra Plains in Ga-Dangbe-Shai (L.A. 20).

Hence localities in three local authorities of the Northern Region have been distinguished by the use of 'area' names which are meaningful in terms of social organisation based upon kinship and tribal groups. Wiasi, for example, is an area made up of several related localities some four of which are given here:—

	<i>Locality code no.</i>
Wiasi Atongyeri (Wiasi Central).....	9000201
Wiasi Yipala.....	9000202
Wiasi Jinesa.....	9000203
Wiasi Goak.....	9000205

The hierarchy of related localities may extend further, as in the case of part of Sandema, for example:—

(a)	(b)	(c)	<i>Locality code no.</i>
Sandema	Bilinsa	Tankungsa	9005501
Sandema	Bilinsa	Bilinsobsa	9005602
Sandema	Bilinsa	Pungsa	9005604

Sandema and Bilinsa are greater and lesser 'area' names, respectively. In terms of traditional organisation, localities (c) 'come under' (b) and (b) 'come under' (a). All of course belong to the modern local authority of Builsa.

2.6 LOCALITY NAME: Names of localities were derived originally from lists of localities prepared for each E.A. by geographical assistants for the purposes of Census

enumeration. These lists were amended where necessary by the Census enumerator in the course of his enumeration, the name in current use by the inhabitants themselves being recorded. The enumerator used his own spelling which did not necessarily conform to any standard orthography. Often in the case of small hamlets the name given is simply that of the head of the community, a suffix being added to indicate 'village'. Common suffixes are—*krom* (in Akuapem Twi), *man* (in Ga) and *korpe* (in Ewe).

Prior to publication provisional lists of Census localities within each local authority were sent out to the field for confirmation of: (a) local authority affiliation of localities, and (b) correctness of spelling of locality names. District committees and regional committees were consulted.

There is as yet no fixed and universally accepted standard for the spelling of locality names in Ghana. Names printed on the topographical maps published by the Survey Division have helped to popularize certain forms of spelling but these are sometimes at variance with phonetic renderings and with spellings adopted elsewhere. Hence, in addition to consulting the district and regional committees, the Census Office submitted a list of all localities to the Bureau of Ghana Languages (formerly the Vernacular Literature Bureau) for amendments in spelling where necessary. The general effect has been to *vernacularize* spellings, i.e. to give a phonetic or near-phonetic rendering which more accurately reflects the sound of the word when correctly pronounced in the appropriate Ghanaian language. Where differences arose between the recommended spellings of the regional committees and the Bureau of Ghana Languages, the Census Office in agreement with the Bureau of Ghana Languages decided on the spelling to be adopted.

Alternative names, wherever given, are indicated in parentheses. Newly recommended spellings, in the case of larger towns and villages especially, are also indicated in parentheses after the more popular spellings, e.g. Chira (Kyeraa). In the case of smaller settlements, approved spelling forms only are given.

2.7 CODE SYSTEM:

a. *Code system for regions and local authorities*—Each local authority is designated by a two-digit code number (marked in purple on the regional maps). Code numbers range from 01 to 93 and are arranged by regions as follows:—

<u>Region</u>	<u>Number of local authorities</u>	<u>Range of code nos.</u>
Western	18	01–18
Accra C.D.	3	20–22
Eastern	13	30–42
Volta	7	50–56
Ashanti	9	60–68
Brong-Ahafo	5	70–74
Northern	14	80–93

Reference to the list of contents at the beginning of this volume will indicate the name and code number of each local authority. For example, 17 refers to Sefwi Wiawso in the Western Region, and 53 Tongu in the Volta Region.

b. *Code system for Enumeration Areas containing one or more localities*—Each E.A. is designated by a five-digit code number. The first two digits relate to the local authority in which the E.A. lies, and the last three to the E.A. itself. Thus 17001 indicates the first E.A. in Sefwi Wiawso (L.A. 17) and 53099 the 99th E.A. in Tongu (L.A. 53). On the accompanying regional maps the last three digits only of each E.A. code number are shown. E.A. numbers run in serpentine order from south to north within each L.A. commencing in the south-west. E.A. code numbers within each local authority may range from 001 to 499.

c. *Code system for smaller localities within Enumeration Areas*—Each locality, below approximately 1,000 population, is designated by a seven-digit code number. The first two digits relate to the local authority, the next three to the E.A. in which the locality is situated, and the last two to the particular locality. Thus 1700101 indicates Bokaakore, a village of 105 population in the first E.A. of Sefwi-Wiawso (L.A. 17) and 5309916 Koeta in the 99th E.A. of Tongu (L.A. 53). Locality digits may run from 01 to 99 within each E.A. the largest is designated 01 but the others are not ranked by size. In a very few cases, due to final-stage corrections, localities which had previously been recorded as the largest in their E.A.'s were found to be somewhat smaller than other localities. Where the differences were slight (e.g. 359 as compared with 362) it was not considered worthwhile to change the locality code numbers.

d. *Code system for towns containing Enumeration Areas*—Where a locality of more than 5,000 population (regarded as a town) has been subdivided into two or more E.A.'s for enumeration purposes, it is shown as a single area on the map and presented as a single locality in the Census tables, designated by two digits ranging from 50 to 59 within each local authority. These two digits are the third and fourth digits of the full locality code number. Thus 3950000 indicates Asamankese, a town of 16,718 population in West Akim Abuakwa (L.A. 39), and 7255000 Chira (Kyeraa) with a population of 5,672 in Brong-Ahafo Central (L.A. 72). The last three zero digits of code numbers are not shown on the regional maps.

e. *Code system for other localities containing Enumeration Areas*—A locality of less than 5,000 population, and usually more than 1,000 population, which has been subdivided into two or more E.A.'s for enumeration purposes, is shown as a single area on the map and is designated by two digits (the third and fourth of the full code number) ranging from 60 to 99 within each L.A. Thus 2060000 indicates Bortianor, a village of 1,840 population in Ga-Dangbe-Shai (L.A. 20); and 2067000 Dodowa with a population of 3,689 in the same local authority. Again the last three zero digits of code numbers are not shown on the regional maps. In the records of the Census Office the last three digit spaces are used to indicate the individual E.A.'s of which the towns and larger localities are composed.

f. *Code system in Builsa (L.A. 90), Kassena-Nankanni (L.A. 91) and Frafra (L.A. 92)*—The locality code system described above has been modified in these three local authorities in the Northern Region, due

to the dispersed nature of the settlement and the manner of the Census mapping. Many of the E.A.'s contain one or more small localities and also parts of other, usually large localities. As a consequence the following procedures have been adopted.

- (i) All localities completely contained within an E.A. as well as the only locality of 5,000 and over (Bolgatanga) have been given code numbers in the normal way (as explained under 'c' and 'd' above).
- (ii) All other localities which have been divided between two or more E.A.'s have been given code numbers ranging from 60 to 99 within each local authority. But such code numbers do not indicate a size range of 1,000 to 4,999 as they normally do in the rest of Ghana and their areas are not shown on the regional E.A. maps.

2.8 POPULATION: The 1960 Population Census was a *de-facto* count. Each person was enumerated at the place of stay on Census Night, 20th March, 1960. The same principle was applied to the population of the country as a whole. Foreign visitors present in Ghana on Census Night were included in, while Ghanaians who were abroad on that night were excluded from, the count. (For further details, see Volume I, Introduction, sect. 5.1.)

2.9 AGE: The age is given in completed years as at Census date. Enumerators had instructions on how to estimate the age of persons who did not know their age. (For further details, see Advance Report of Volumes III and IV, Introduction, sect. 2.11.)

2.10 BIRTHPLACE: This refers to the actual locality where the person being enumerated was born. Enumerators' attention was drawn to the fact that some people are inclined wrongly to regard their *home-town* or *home-village* where the family comes from, as being automatically their place of birth. The questionnaire provided for three mutually exclusive types of information on birthplace, each to be recorded in a different column:—

- a. *Born in this town or village*—For all those who were born in locality of enumeration. The locality ought to have been defined as in the 1960 Census (see 2.5 above) and not as at the time of birth.
- b. *Born in another town or village in Ghana*—For such a person the enumerator had to specify the town or village and the region in which he or she was born. Here too, the regions defined are those existing at Census date (see 2.2 above). The specification of region was expected to be a difficult one for many reasons, the main ones being changes in administrative boundaries in past years and the occurrence of the same locality name in more than one region. To assist the enumerator, a list of traditional areas formerly called *states* with the name of the *paramount chief* (customary head of traditional area), classified by the seven Census regions, was given in the Enumerator's Manual. Many persons especially those from rural areas could indicate the traditional area in which they were born or the name of its present *paramount chief* rather than the name of the appropriate region.

c. *Born outside Ghana*—For such persons the name of the country was required. Enumerators were instructed not to use names of broad geographic or political units like African, European, American but to specify the exact country. In particular, the enumerator was cautioned against the use of terms like 'French territory' or 'French' which are often related to or used by an African from the neighbouring ex-French territories instead of the actual country name like Ivory Coast, Dahomey, Upper Volta, etc.

In this volume data on birthplace are given in 5 columns. The first three columns comprise all those who under 'a' and 'b' indicated a locality in Ghana, namely: *this locality* means that the person was born in the locality in which he was enumerated; *another locality, same region* means born outside the locality of enumeration but still in the region of enumeration; *another region in Ghana* (self-explanatory). The last two columns of birthplace relate to those who under 'c' above stated their birthplace to be outside Ghana. These were divided into two groups: *African country*—including all persons born in a country of the African continent irrespective of their country of origin; *another country*—comprising all persons born on all other continents, namely in Asia, Europe, America and Australia.

2.11 REGULAR SCHOOL ATTENDANCE: The Census items termed *full-time education* related actually to two concepts. The questionnaire provided three separate questions the first of which referred to *school attendance* in the strict sense and the other two to the *level of education*. In this volume only statistics on school attendance are published. Consequently, mainly this concept will be explained here while the other two will be only briefly mentioned. The three questions were:—

- (a) Whether attending school *now*, in the *past* or *never*.
- (b) Type of school attended.
- (c) Highest standard or grade attained ('b' and 'c' had to be answered for persons whose reply to question 'a' was *now* or *in the past*).

The questions were asked only from persons aged 6 years and over. Children below 6 although attending a school were excluded for several reasons: their number was estimated to be small; in many cases enumerators used the fact of school attendance as an indication that the child is 6 years or more and estimated the age according to the grade attained; children under 6 years are more likely to attend kindergartens, nurseries and similar institutions which might be confused with regular schools and thus inflate the figures of regular school attendants.

Information was sought only about *regular school attendance*. In the Enumerator's Manual it was explained that 'a person is regarded as receiving or having received full-time education if he or she is attending or has attended a *regular* primary, middle, secondary, university or some other similar type of school where he or she spends or has spent at least four hours a day in receiving general education and in which the emphasis was not on vocational or trade training'. The definition included both governmental as well as private institutions, like

missionary schools and Arabic schools, but excluded private tuition, correspondence courses, night schools and trade schools such as in the Workers' (formerly Builders') Brigade and the motor schools. Where the enumerator was in doubt as to whether a given institution fell within the definition or not he was required to enter the name of that institution. This enabled the Census Office to decide upon its classification.

It should also be noted that the definition of regular school attendance is not identical with that of *literacy*, a subject which was not enquired into in the main Census (but only in the Post Enumeration Survey).

2.12 ECONOMIC ACTIVITY (Type of Activity):

Before giving an explanation of the definitions used and of the methods of interviewing and recording the following remarks should be made:

- (1) Uniform principles and methods of enquiry were adopted throughout the whole country in urban and rural areas. In particular, no distinction was made between areas where, or population groups among which, subsistence economy might be substantial if not predominant and those areas or population groups with a mixed or market economy. Sometimes, it is considered that in areas where most of the work activities of most of the population is directed towards producing agricultural and other products by the family and for the family's consumption (subsistence economy) it is difficult to distinguish between the *economically active* and the *not economically active* persons. Also, it is suggested that in such areas different aspects of enquiry might be of interest than in areas with a predominant market economy where most of the economically active population is engaged in producing goods and services for which money is received (U.N. Handbook of Population Census Methods, Volume II).
- (2) Information was sought only on persons aged 15 years and over. Persons under 15 years, although some of them were working for pay or profit, were not included in the enquiry.
- (3) The time-reference principle was adopted. The reference period was, with a few exceptions (*see working* defined) one month (or four weeks) preceding Census Night. This relatively short period was chosen for several reasons and mainly to minimize memory lapse and to keep a uniform and clearly defined reference period for the determination of the economic characteristics (occupation, industry, etc.) which otherwise, say if related to a larger period, would be more difficult to determine and interpret.
- (4) The enquiry covered all *types of activity*—economic and non-economic ones. The division into: (a) *economically active* population and (b) *not economically active* population was not mentioned either in the questionnaire or in the Enumerator's Manual for reasons of simplicity and brevity of explanation. However, the

concepts were embodied in the distinction by type of activity so that by grouping together the *employed* termed '*working*' and the *unemployed*, one can obtain the economically active population. All other types of activity should be included in the not economically active category.

A. THE ECONOMICALLY ACTIVE POPULATION

a. *Employed* (working). The Census question asked whether the respondent did 'any work for at least one day last month' (meaning the month preceding the Census Midnight) and if 'no' how was he or she 'mainly occupied last month'. The concept of 'working' as defined in the Enumerator's Manual included the following categories of persons (aged 15 years and over):

- (i) Persons who did some kind of work for pay or profit.
- (ii) Persons who worked on their own farms though they may not have sold any produce during the month preceding the Census.
- (iii) Persons who did not work during the month preceding the Census but who had jobs from which they were temporarily absent, because of:—
 - (1) *Off season*—mainly farmers who owing to the Census being taken in the 'dry season' did not work on their farms. On the other hand, casual farm labourers who did not work in the said month should be regarded as un-employed (*see below*).
 - (2) *Temporary illness*—but with intention to return to the previous job after recovery.
 - (3) *Labour dispute* (strike or lock-out).
 - (4) *Temporary lay-off*—with instructions to return to work at a definite date, e.g. permanent farm labourers in the off-season, workers in business establishments non-operating temporarily owing to structural changes or equipment alterations and similar hindrances.
- (iv) Persons, known as *family workers* who worked, even without remuneration, for *at least one week* during the reference month in an economic enterprise (farm, store, workshop, etc.) of another member of their household. This minimum period is a slight departure from the one recommended by the United Nations namely, one-third of *normal* working hours. Another departure from these recommendations is that in Ghana persons aged 15 years and over who attended a full-time educational institution were not regarded as working but as students even if they worked the required minimum of time. This rule was adopted in order to avoid inflation of the

figure of the economically active population. The Census was taken during the first term vacation which was, exceptionally extended for Census reasons and many school children who normally would not be classified as working would have been included in this category on the basis of the minimum working period required.

- (v) Domestic servants—who are remunerated for their work in money or in kind, despite the fact that they are performing duties similar to those of home-makers.
- (vi) Apprentices—because under local conditions most if not all apprentices receive some remuneration.
- (vii) Armed forces—were also included in accordance with U.N. recommendations but will not be shown separately because of the paucity of the figures (one could however obtain their data from the classification by industry).

Un-employed—a person who did not work at any time during the reference month and had no fixed job, unlike persons in categories listed under A.a. III above, and who was 'looking actively' for work by visiting employment agencies, writing applications, etc. (Otherwise he ought to have been classified as *voluntarily un-employed*, see below.)

B. THE NOT ECONOMICALLY ACTIVE POPULATION

As in the case of the economically active population, this category was not mentioned explicitly in the instructions but it can be obtained from the classification by type of activity by including the under-mentioned main types of activity:

- a. *Home-makers* (commonly referred to as *housewives*)—persons of either sex who were wholly engaged in household duties and not paid for this work. If they traded in the month preceding the Census even for a few hours each day or altogether for one full day in the street or in the market or were engaged in economic enterprises (e.g. farm, bar) or did any part-time work (e.g. typing, dress-making) for which they were paid, or if they worked without pay on family farm or in any family business for at least one week—they ceased to be classified as home-

makers and should be classified with the working population. These are almost literally the explanations given in the Enumerator's Manual. This definition emphasises rather who should not be regarded as home-makers by listing the economic activities typical for the women in Ghana (trading part-time or full-time, working on family farm, dress-making, etc.). As can be seen from the statistics of the 1960 Population Census the percentage of the economically active population among women is relatively high but this figure should be analysed in the light of the definition adopted and by examining the actual occupations and employment status of the female working population.

b. *Students.*

c. *Attendants of trade training and vocational schools.*

d. *Disabled.*

e. *Income recipients.*

f. *Voluntarily un-employed.*

g. *Others* (mainly inmates of prisons, borstal institutions, etc.).

In this volume out of the many categories of the not economically active population only *home-makers* are shown separately while all other types mentioned under 'b' to 'g' above are grouped under the heading *other*. For a more detailed explanation of these categories the reader is referred to the Advance Report of Volumes III and IV, Introduction, sect. 2.15.

2.13 EMPLOYED IN AGRICULTURE: Of the total number *employed*, i.e. of the working population only, the total number engaged in the industrial branches of agriculture, forestry, hunting and fishing is shown. The classification by industry (as well as by occupation and employment status presented in other volumes) is not given for the unemployed. For the sake of brevity and simplicity of the main Census questionnaire, it was decided not to enquire from the unemployed about their previous economic activities. This is a slight departure from the recommendations of the United Nations. (This item was included in the Post Enumeration Sample Survey, see Volume I, Introduction, sect. 2.3.)

Industry was defined as the economic branch of the establishment in which the respondent worked. The information was obtained by means of two questions: One relating to the *major product or service* of the establishment and the other to the *name and address* of that establishment (for further details see Advance Report of Volumes III and IV, Introduction, sect. 2.16).
